DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-17, drawn to a method for quantitating cholesterols, which involves a compound having a relatively strong affinity with non-measuring lipoproteins.

Group II, claim 18, drawn to a reagent comprising a compound having a relatively strong affinity with non-measuring lipoproteins.

Group III, claim(s) 19-23, and 25-29, drawn to methods for quantitating cholesterols, which involves a compound having a relatively strong affinity with measuring lipoproteins.

Group IV, claims 24 and 30, drawn to reagents for quantitating cholesterols, which comprises a compound having a relatively strong affinity with measuring lipoproteins.

Page 3

2. The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking Groups I-IV appears to be the use of a compound that has a relatively strong affinity with lipoproteins in a sample and a surfactant that exhibits a relatively strong action on lipoproteins in the sample in a method for quantitating cholesterol.

However, Pascal et al. (US 4,366,244) teach a method for quantitating cholesterol the steps of determining the amount of cholesterol in a lipoprotein fraction in a sample in the presence of a compound (concanavalin A) having a relatively strong affinity with lipoproteins in the sample (see the abstract, lines 1-2 and column 10, lines 45-60 in particular). Pascal et al. also teach a surfactant for use in the method (TritonX100) that exhibits a relatively strong action on lipoproteins (column 6, lines 59-61).

Therefore, the technical feature linking the inventions of Groups I-VI does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art.

3. A telephone call was made to Surinder Sachar on May 31, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Page 4

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christine Foster whose telephone number is (571) 272-8786. The examiner can normally be reached on M-F 8:30-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long Le can be reached on (571) 272-0823. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Application/Control Number: 09/926,199
